

AI Decision Orchestrator Framework

A cost-efficient architecture for enterprise AI query handling

Problem Statement

- Not every query requires expensive AI processing.
- Enterprises need cost-efficient AI architectures.

Architecture

Key Benefits

- Reduced LLM Costs** — AI compute is invoked only when structured filtering can't resolve the query.
- Lower Latency** — Most queries resolve on the fast, deterministic path.
- Improved Explainability** — Every routing decision carries a human-readable reason.
- Better Scalability** — The cheap path absorbs the majority of traffic growth.
- Enterprise Governance** — Every query is logged, traceable, and auditable.

Vision Statement

Combining traditional systems and AI-driven intelligence to deliver sustainable enterprise value.
